## WATER RESISTANT CONSTRUCTION + W-TEX

Footwear with this symbol is designed to include **water resistant** membrane

FOR HIGHER LEVELS OF WATER RESISTANCE

The W-tex membrane is a specialised feature designed to enhance water resistance. While it does not guarantee complete waterproofing, it significantly improves the ability to resist water penetration.

Klaveness employs this technology in selected certified waterproof stock styles, which can be customised for better water resistance through additional features like:

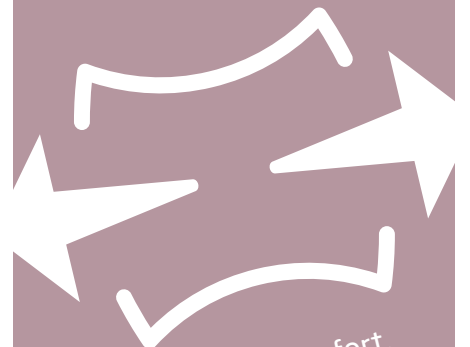

- Bellows tongues** - Prevent water from seeping through the laces;
- Coated split mudguards** - Protect from splashes and mud;
- Hooks** - Secure the fit to minimise water entry;
- W-tex lining** - Adds an extra layer of water resistance.

This combination of materials and construction techniques prepares the footwear to withstand tough conditions, such as Nordic winters.

Customers looking to maximise water resistance should opt for the "**W-tex (water-resistant)**" option when ordering

## STRETCH MATERIAL

Footwear with this symbol is partially made with **stretch material**

Stretch ensures comfort, increases flexibility and adaptability to the foot

# KIDS COLLECTION

This catalogue displays the **standard configuration (FIA)** for each style.

All **colour/material** options are available at **klaveness.no**, in the **Materials Guide** section.

## BUILT EVA SOLES

We build up each midsole from an EVA block to the required height and configuration. A welt is attached, and a track is assembled as a separate part of the construction.

The standard EVA is Shore  $\approx$ 50. Shore  $\approx$ 35 (soft) is also available.

The heel height of **Built and Milled EVA Soles** is always defined by:

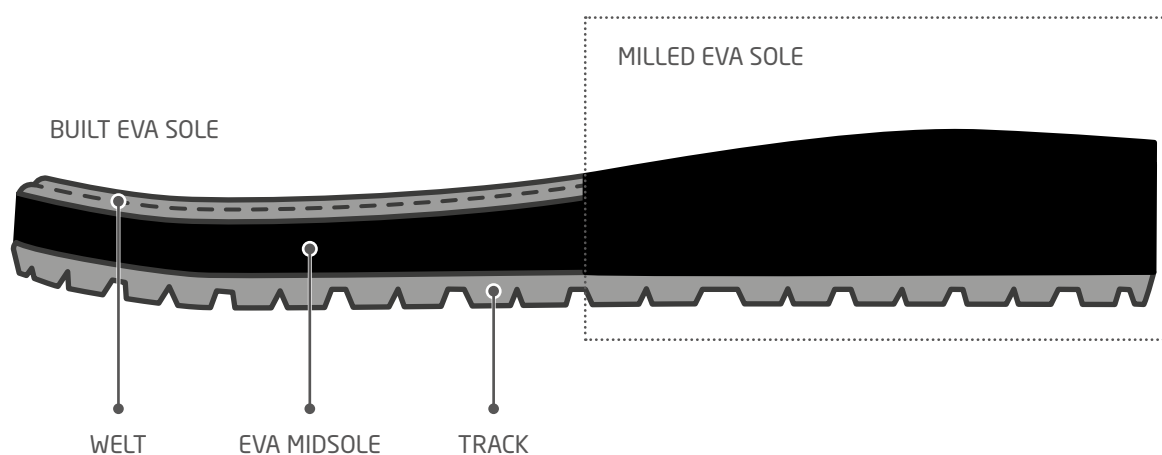

- The heel height of the last (or)
- The one specified in the order

## MILLED EVA SOLES

The midsole unit is milled from an EVA block shaped according to your requirements. Milled soles are produced without layers of material and glue. They do not need a separate welt, as the wall in the milled EVA acts as a cup, concealing some of the footwear's visible height. Overall, it results in a lighter and more flexible sole.

The standard EVA is Shore  $\approx$ 50. Shore  $\approx$ 35 (soft) is also available.

- Conceals shoe volume by adding depth to the sole.
- No need for a separate welt - it is milled from the same EVA block as the midsole. Less glued layers result in a more flexible and appealing sole.
